

Broome County Environmental Management Council (EMC) Survey of Important Natural Areas

The EMC is working cooperatively with Binghamton University professors, local citizens, and other interested groups and agencies to develop an inventory of special/unique/important/natural areas in Broome County. If you have any formal or informal training or expertise and would like to assist with data collection and/or verification of information, please indicate so on the survey, or contact university professors, Dr. Richard Andrus and/or Dr. Julian Shepherd (see information below). Please take the time to identify and describe, in as precise detail as possible, any important natural areas that you know of in our community. These could be **ecologically sensitive areas** (provide habitats and foster diversity of species, water supply protection, or best example of a particular ecosystem in our community). They could also be **aesthetic resources** (natural open spaces, favorite secluded hiking or viewing spot, and teaching or learning area). *Attach another sheet if necessary.*
